

Planing knives MC33

For high quality cutting and longer tool life

Conventional planing knives often have a poor tool life and thus cause unnecessary machine downtime.

MC33 planing knives from Leitz increase productivity due to longer tool life and reduced sharpening cycles. In addition, the degree of utilization of the machine increases due to reducing the number of necessary set-up processes.

YOUR BENEFITS

- Longer tool life
- Less machine downtime
- Excellent planing results

AT A GLANCE

- Available in 3 mm thickness with 30 mm and 35 mm height
- Knife sets are paired to the same weight
- Multiple resharpens and are jointable
- Suitable for all conventional planing machines with precision spindles
- Applicable in soft and hard wood
- Standard: available from stock, special production: available at short notice
- With Marathon high-performance coating

Up to 6-fold

- HIGHER TOOL LIFE COMPARED TO UNCOATED HS-PLANING KNIVES

Up to -80 %

- LESS SERVICE EFFORT COMPARED TO HS-PLANING KNIVES

Up to -80 %

- LESS MACHINE DOWNTIME

Your benefits due to ...

SUSTAINABILITY

Longer tool life and protection of the machine

- Perfect use of cutting material through Marathon coating
- Up to 6-fold tool life in comparison to uncoated HS-planing knives
- Protection of the machine bearings due to increased balance, knives supplied within a precise weight tolerance

PRODUCTIVITY

Less machine downtime

- Significantly reduced machine downtime due to longer cutting edge tool life performance
- Fewer tool change through long tool life

FLEXIBILITY

Flexible use

- Suitable for the use in all conventional wedge-type planer-heads designed for 3 mm thick planing knives

Longest tool life
with best planing
quality!
